

## Remote Monitoring and Management

### Proactive and Affordable IT Support

It can take 197 days to identify a data breach and 69 days to resolve it, without the right support.<sup>1</sup> As a business owner, you know the importance of maintaining your IT infrastructure to prevent downtime and the high costs associated with restoring systems back to working order. With Sharp on your side, have confidence knowing your servers and workstations are being monitored at all times.

### Ensure Your Physical IT Assets Are Fully Protected

Many business owners call their IT professional when it's too late or when systems are already down. What if you could have prevented downtime in the first place? What if you had someone monitoring your environment 24x7? Our Network Operations Center (NOC) monitors your servers around the clock and helps them remain up-to-date and optimized for performance. We also run scheduled maintenance on your desktops including anti-virus and anti-spyware scans to help guard against typical malware.

**Server Management**  
for optimal server health

**Computer Maintenance**  
with endpoint monitoring

**Performance Optimization**  
with proactive patching

**Vendor Management**  
to streamline daily operations

**Network Device Management**  
for optimized workflow

Is your network vulnerable? Take our consultative technology review to find out or visit [www.sharp-sbs.com/cybersecurity](http://www.sharp-sbs.com/cybersecurity) today.
